

E12

Rapid Repair & Winter Establishment

Rapid germination for emergency repairs and low temperature germination for winter use. In trials the annual ryegrass has germinated at temperatures as low 3.5°C.

- Annual ryegrass Barterra can germinate in 3-5 days in normal temperatures
- Ideal for repairing winter sports pitches
- Double, tetraploid ryegrass is broad-leaved for increased visual cover
- Good red thread tolerance
- Strong establishment
- Very hard wearing

In the bag

50%	Double	Perennial ryegrass tetraploid
50%	Barterra	Annual ryegrass

Sowing rate:	30-40g per m ²
Overseeding rate:	20-40g per m ²
Height of cut:	Down to 20mm
Pack sizes:	20kg
