

Adapt

Long-term, top class, highly flexible, dual purpose mixture without clover which produces top quality forage suitable for cutting and grazing.

- This blend of yield and palatability creates a very flexible ley meaning you will get long-term production from this highly persistent ley
- The omission of clover allows for cost effective weed control
- The mixture is balanced for season-long performance with intermediate and late perennial ryegrasses included
- Designed to perform especially well in early summer (May/June), ADAPT gives over 10% more yield than SRUC control varieties during the season
- Maximum production by using the top yielding varieties including *Moira* and *Fintona*, both top of their class for yield (106% and 111% respectively of control varieties)
- The inclusion of Timothy is beneficial where increased ground cover is needed and where winter grazing occurs
- Contains only first choice SRUC varieties

| In the bag | | |
|------------|-----------|---------------------------------------|
| 5.50kg | Moira | Intermediate Perennial Ryegrass (DIP) |
| 2.50kg | Fintona | Intermediate Perennial Ryegrass (TET) |
| 4.00kg | Tyrella | Late Perennial Ryegrass (DIP) |
| 2.00kg | Ballintoy | Late Perennial Ryegrass (TET) |
| 1.00kg | Comer | Timothy |
