

BarRobusto™

Golf, Multi-Use Sports Fields, Parks, & Lawns

Drought Tolerant

Disease Resistant

Dark Green

Key features

- Tolerance to Brown Patch
- Pythium Blight resistance
- #1 turf quality in Southwest region
- Good spring green-up
- Good fall color
- High endophyte level

30% Less Water

BarRobusto is currently certified with the Turf grass Water Conservation Alliance. To learn more about the TWCA certification process visit their website at:

tgwca.org

BarRobusto is another dependable turf-type tall fescue variety brought to your from Barenbrug USA's research team.

BarRobusto is a semi-dwarf turf-type Tall fescue with medium texture and dark color. BarRobusto exhibits a high level of endophyte which increases its resistance against pests and diseases as illustrated by its resistance to Brown Patch and Pythium Blight. BarRobusto is an extremely drought tolerant variety, competing with the best of today's available Tall fescue varieties.

Technical Information

Uses

BarRobusto is a regular component of Water Saver Pro and Turf Saver RTF. BarRobusto is great for reducing overall water costs, or increasing turf quality in areas that already have low irrigation budgets. The qualities of BarRobusto are often utilized in golf course roughs, low maintenance sports fields and parks, home lawns, and naturalized no-mow areas.

Establishment

Seeding and establishment may be done in spring or fall, but be wary of summer or winter annuals. For better early weed control, consider an application of Me-sotrione in the seeding process. Plant seeds to a depth of no more than 0.25-0.50" below the soil surface to ensure good seed to soil contact. Thatch layers will only slow or impede germination success. After spreading seed, keep seedbed moist throughout germination, with extra care during the early stages to prevent seed from drying out after initial seed imbibition. Germination should begin within 7 to 14 days and be complete within 21 days. The stand should establish in 30 days. Remember, the full turfgrass establishment process may take 6 months to a year.

Specifications

Seeding Rate:	8-10lbs./M*
Mowing (Recommendation)	2.5-3" (or no-mow)
Mowing (Down to)	0.750"

*M=1,000 square feet
