

T-1™

Golf Course Greens, Tees, and Fairways

Deep Blue/Green Color

Tolerates Low Moisture

Early Spring Green Up

Key features

- Aggressive against Poa annua
- Microdochium Patch Resistant
- Superb Fall Collor
- Low Thatch Production

A-List Certified

T-1 is currently certified with the Alliance for Low Input Sustainable Turf. To learn more about A-List and the certification process visit their website at: a-listturf.org

Maintenance:

New Seeding: 1-2lbs./M*
Interseeding 2 lbs./M*

*M=1,000 sq. ft.

[Learn More](#)

T-1 creeping bentgrass will turn heads with its vibrant dark blue-green color painting greens, tees, and fairways.

Originating from selections found on 40 to 100-year-old golf course bentgrass stands in the Southern United States, crossed with dwarf-type cultivars found in Oregon, T-1 possesses unique and versatile genetics. These diverse genetics allow T-1 to thrive under varying management practices and provide aggressive stoloniferous growth.

Technical Information

Applications

T-1 creeping bentgrass will provide tournament-quality turf on any golf course as it competes against your biggest enemy; annual bluegrass. Producing about twice as many stolons as a typical bentgrass, T-1 quickly establishes and fills any void, whether that is from a divot, aerification, or grow-in. T-1 is not only versatile on the golf course but is widely used across the United States in low- and high-input situations. T-1's aggressive nature and tolerance to a wide range of mowing heights allows it to be used from tees to greens. T-1 is an excellent selection for interseeding greens as it out competes Poa Annua and provides superior dollar spot resistance.

Establishment

For in-depth establishment and maintenance tips please see our "Bentgrass Management Guide".
