

Ensign Red

Red clover blend

- ENSIGN RED is a blend of red clovers which balances production through the growing season, while maintaining excellent persistency and disease resistance
- Managed correctly, red clover swards can meet the forage requirements of many farms and significantly improve the protein contents and overall feed value of winter forage
- It's better suited to silage production than white clover because of a more erect growth habit and its significantly higher forage yields
- Red clover silage has a high crude protein content of 16% to 20% and a ME content of 10 to 12MJ/kg DM
- Because red clover is high in phytoestrogen, breeding sheep should be kept off for six weeks either side of tupping
- Store / fat lambs can be fattened very effectively on red clover silage aftermaths

In the bag

Discovery	Red Clover
Lemmon	Red Clover

Pack sizes:	5kg minimum pack size
Sowing rate:	Up to 1kg per acre 2kg per acre for overseeding

- Low levels of structural carbohydrate in the leaf result in higher intakes, better feed conversion and therefore improved animal performance
- Potential nitrogen fixation for red clover up to 200kg N/ha via its long season growth and usage of deep rooting varieties
