

BarBumper

Forage boost

- BARBUMPER is a very flexible product that can fit into different regimes where extra forage is required immediately
- The specialist ryegrass mix will produce up to 30% more forage than a newly sown perennial ryegrass ley
- Very fast establishment from high quality tetraploid seeds
- Can assist with prevention of winter soil erosion
- Strong Autumn-Winter-Spring growth
- High quality, high quantity forage production from 2-18 months
- It has the ability to make use of existing nutrients in the soil after previous crop soaking
- Adds organic matter to the soil improving its quality, structure and nutrient holding capacity
- Blending Italian & Westerwold ryegrasses ensures the mixture delivers maximum performance
- Delivers up to 30% more yield in the first year compared to a perennial ryegrass ley
- UK proven varieties
