Premier II, Barenbrug's highest quality turf-type perennial ryegrass, is simply the best, as evidenced from the continued use by elite golf destinations such as Pebble Beach® and PGA West®. For multiple uses such as homes, parks, sports fields, and golf courses you can't do better than Premier II, which is absolutely the best of the best.

Why Premier II?
- Good disease resistance
- Fast germination
- Very dark green color and fine-leafed
- Good winter hardiness with excellent spring greenup
- Excellent low mowing quality
- High turf density, restricts poa annua and crabgrass
- Contains lolium endophyte fungus to provide insect resistance
- Excellent for overseeding

Premier II is the BEST of the best.
PLANT CHARACTERISTICS

Premier II turf-type perennial ryegrass is a versatile grass with excellent dark green color, very quick spring greenup and a very fine leaf blade. It forms a very dense turf and displays great adaptability to a wide range of soil conditions. Premier II consistently rates high for turf quality, disease resistance, density, color, and low mowing quality.

SEEDING AND MAINTENANCE INSTRUCTIONS

- **SEEDING RATE:**
  - Fairways: Seed 300 to 400 lbs. per acre
  - Greens: 30 to 35 lbs. per 1,000 sq. ft.
  - Tees and Aprons: Overseed at about 15 to 20 lbs. per 1,000 sq. ft.
  - Winter Overseeding: 400 to 800 lbs. per acre or 10 to 20 lbs. per 1,000 sq. ft.
  - Lawns and other areas: 5 to 15 lbs. per 1,000 sq. ft.

- **GERMINATION & ESTABLISHMENT:** Keep seedbed moist to enhance germination. Under ideal conditions, germination should begin within 3 to 7 days and be complete within 15 days. The stand will be well established in 21 days.

- **FERTILIZATION:** For optimum results apply .50 to .75 lbs. of N/1,000 sq. ft. per application during the growing season. Requires 3 to 6 lbs. N/1,000 sq. ft. per year. The fertilization rate will vary depending on the growing season and the usage of the grass.

- **MOWING:** Performs best at 1 to 2 inches. Will tolerate mowing to ½ inch under high maintenance conditions. Do not remove more than 1/3 of total plant height with each mowing.

- **WATERING:** After establishment, a deep watering program is recommended to improve root depth. Irrigate according to turfgrass needs for your geographical area.
