

GOALKEEPER II™

Perennial Ryegrass

Traffic Tolerant

Disease Resistant

Fast Establishment

With excellent cold and traffic tolerance, Goalkeeper II will keep your heavy traffic areas, like soccer goals or practice fields, in better playing shape throughout the season.

Winter performance: Goalkeeper II was bred in North Idaho so it has proven cold temperature adaptation. It ranked among the top 5 against winter damage in trials in New York and had reduced low temperature damage in South Dakota. Goalkeeper II also retains its dark green color in the winter.

Seedling Vigor: Goalkeeper II is one of our fastest germinating ryegrasses and gets a jump on the season with excellent seedling vigor. Goalkeeper II establishes quickly resulting in little down time from your seeding project.

Disease & Pest Package: A variety with an impressive disease and pest resistance profile, Goalkeeper II exhibits high resistance to red thread, brown patch, pink snow mold, and pythium blight.

Technical Information

Applications

GoalKeeper II is adapted to use on sports turf, golf course fairways, roughs, and tees, home lawns, parks, and industrial and school sites in cooler regions and for winter overseeding on dormant bermudagrass in warmer regions.

Seeding Rate:

New Establishment:	5-10lbs./M* (25-50g/m ²)
Overseeding dormant bermudagrass on greens:	10-30lbs./M (50-150g/m ²)
On fairways:	200-500lbs/acre (225-565kgs/ha)
Mowing (recommendation)	0.5"-2"
Mowing (down to):	0.44"

*M=1,000 square feet
