

TOP GUN II™

Perennial Ryegrass

Traffic Tolerant

Early Spring Green-up

Fast Establishment

Get your spring operations off to a quick start using Top Gun II for its superior spring density and green-up.

Winter performance: Top Gun II shows great winter survival in northern locations with good resistance to pink snow mold.

In more southern areas, Top Gun II has shown its adaptability to overseeding. In an overseeding trial on dormant bermudagrass at Toscana Country Club in Indian Wells, CA, Top Gun II displayed lovely quality, color and density and can be mown down to putting green heights for overseeding (mown at 0.44 in., or 11 mm).

Wear Tolerance: First-rate adaptation to high traffic areas. When trialed under simulated traffic conditions at Michigan State University, Top Gun II was among the Top 10 out of 120 entries.

**EXCEPTIONAL
TRAFFIC
TOLERANCE**

Key features

- Good resistance to pythium blight and brown patch
- Excellent wear tolerance under high traffic
- Good winter performance
- Dark genetic color

Top Gun II in California

Technical Information

Applications

Top Gun II is adapted for use on golf course fairways, roughs, and tees; sports fields, home lawns, parks, schools, and industrial sites in cooler regions. Top Gun II is also recommended for winter overseeding on dormant bermudagrass in warmer regions.

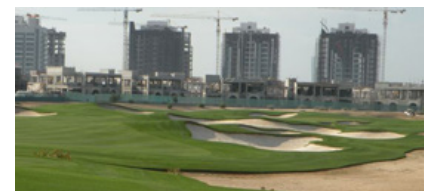

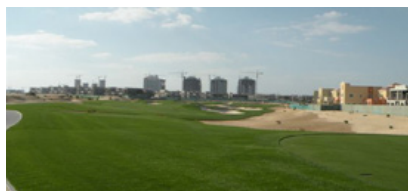

Specifications

Top Gun II has good Northern and Midwest adaptation and is adaptable to different management regimes- high, medium and low; including low cutting heights of 0.5-2 in. (1.2-5 cm).

Seeding Rate:

New Establishment:	5-10lbs./M ² (25-50g/m ²)
Overseeding dormant bermudagrass on greens:	10-30lbs./M (50-150g/m ²)
On fairways:	200-500lbs/acre (225-565kgs/ha)
Mowing (recommendation)	0.5"-2"
Mowing (down to):	0.44"

¹M=1,000 square feet
