

## Ensign Duet

### Red and White Clover Blend

- ENSIGN DUET is a unique mixture of red and white clovers, developed to meet the need for rapid nitrogen fixation to feed new leys
- Red clovers establish faster than white and are able to make nitrogen available to the ley as the white clover is establishing

#### Additional benefits:

- Increased yield. Our mixture trials show a yield increase of 5% in the first year after sowing, worth around £100.00 per hectare (£40.00/ acre)
- The increase continued into the second harvest year, producing additional yields worth £75.00 per hectare (£30.00 /acre)
- Increases the overall protein content of the sward; red clover's protein content is around 17% compared to grasses of around 12%

### In the bag

67%	Ensign Red	Red Clover Blend
33%	Ensign	White Clover Blend

<b>Pack sizes:</b>	5kg minimum pack size
<b>Sowing rate:</b>	Up to 1kg per acre 2kg per acre for overseeding

- Because red clover is high in phyto-oestrogen, breeding sheep should be kept from grazing for six weeks either side of tupping
- Red clover is excellent feed for growing and finishing stock
- Contains recommended Herbage Varieties Guide varieties
