

# Barserati®

## Golf, Mutli-Use Sports Fields, Parks, & Lawns

Drought Tolerant

Disease Resistant

P-105 Type

### Key features

- High NTEP turf quality (2011 & 2017 classes)
- Uniform, medium texture
- Summer Patch resistance
- Rust resistance
- Spring green-up
- Traffic tolerance & recovery

### 30% Less Water

30% Less Water

Barserati is currently certified with the Turf-grass Water Conservation

Alliance. To learn more about the TWCA certification process visit their website at:

**Barserati (Bar Pp 110358) provides consistent, proven results. Now in its second NTEP trialling cycle, Barserati is showing resilience in the many unique climactic regions across the U.S.**

Recent DNA work out of Rutgers suggests Barserati to be a P-105 Type bluegrass. Barserati has desirable traits in drought tolerance, disease resistance, traffic tolerance, and good color throughout the year. These traits combine to create a high performing monostand or blend of Kentucky bluegrass, as well as adding value to other grass seed mixtures.

## Technical Information

### Uses

Barserati is best used where overall turf performance and drought tolerance is desired. This variety is typically utilized in the home and landscape sectors for its resilience and flexibility, while golf, sports, and parks sectors prefer it for its durability under heavy traffic and environmental stress.

### Establishment

Seeding and establishment may be done in spring or fall, but be weary of summer or winter annuals. For better early weed control, consider an application of Me-sotrione in the seeding process. Plant seeds to a depth of no more than 0.25-0.50" below the soil surface to ensure good seed to soil contact. Thatch layers will only slow or impede germination success. After spreading seed, keep seedbed moist throughout germination, with extra care during the early stages to prevent seed from drying out after initial seed imbibition. Germination should begin within 14 to 21 days and be complete within 35 days. Remember, the full turfgrass establishment process may take 6 months to a year.

### Specifications

Seeding Rate:	2-3lbs./M*
Mowing (Recommendation)	2-3"
Mowing (Down to)	0.500"

\*M=1,000 square feet

# Trial Data: 2011 NTEP Final Report

## Summary of Turfgrass Quality: Mean Quality

VARIETY	SCORE
Blue Note	6.3
Barserati	6.1
Midnight	6.1
Barvette HGT	5.9
Blackjack	4.7
L.S.D.	0.3

## Summer Density

VARIETY	SCORE
Barserati	7.4
Barvette HGT	7.4
Shamrock	5.2
Midnight	4.7
A05-329	2.8
L.S.D.	1.5

## Thatch Measurements (mm)

VARIETY	SCORE
Barvette HGT	0.5
Barserati	2.0
Shamrock	8.3
America	12.0
A05-329	24.2
L.S.D.	8.1

## Spring Green-Up

VARIETY	SCORE
Barsahara	6.7
Barvette HGT	6.3
Barserati	5.7
Midnight	3.7
J-1136	3.5
L.S.D.	0.5

## Genetic Color

VARIETY	SCORE
Sudden Impact	7.9
Midnight	7.8
Barduke	6.1
Barserati	5.6
Barvette HGT	5.2
L.S.D.	0.4
