

Barmix

Long-term, low input, high output mixture for beef and sheep enterprises.

- A highly successful, persistent, drought tolerant, high protein sward for beef and sheep production from a clover-based sward
- BARMIX uses the best new cocksfoot and tall fescues to produce a highly palatable, very productive ley
- As a result it produces considerably more grass than conventional ryegrass leys especially under low fertiliser conditions and low fertiliser usage
- This innovative mixture has been developed by us to offer an alternative mixture for beef and sheep enterprises looking for a low input, high output mixture
- The ryegrasses in the sward are highly productive, contributing to the total performance
- *Baraula* (cocksfoot), *Barelite* and *Bardoux* (tall fescues) are proven in on-farm grazing trials to be highly palatable due to their soft leaves

In the bag

2.50kg	Callan	Late Perennial Ryegrass (DIP)
3.00kg	Ballintoy	Late Perennial Ryegrass (TET)
3.00kg	Barelite	Tall Fescue
2.50kg	Bardoux	Tall Fescue
1.00kg	Baraula	Cocksfoot
1.00kg	Comer	Timothy
1.00kg	Ensign	White Clover Blend

Sowing rate per acre:	14kg per acre
Sowing rate per m²:	2,814 seeds per m ²

- Tall fescue is a winter active species and cocksfoot grows earlier in the spring than other species, delivering that vital early bite for lambing
- Tall fescues *Barelite* and *Bardoux* add excellent drought tolerance due to their deep rooted, persistent nature. They are also more tolerant of waterlogged soils
