

# Baronaise

## Timothy

Baronaise is a Timothy which was bred in Holland by Barenbrug NL and first officially listed in the UK in 2020.

Baronaise performs very well under both cutting and grazing management schemes making it a very flexible option and ideal for fields that receive both treatments. Baronaise will provide key feature is its quality and it is the highest quality Timothy available on the Recommended List.

<b>Species:</b>	<i>Phlelum pratense</i>
<b>Officially listed in:</b>	England and Wales (and Holland, Denmark & France)
<b>Heading Dates:</b>	England & Wales 13th June
<b>Bred in:</b>	Holland
<b>Most suited to:</b>	Any medium – long term ley which will be grazed or cut and where late season growth is important.

	Recommended Grass & Clover List for England and Wales 2020/2021
<b>Total Average Cutting Yield</b>	13.83 t DM/ha
<b>Total Grazing Yield</b>	10.31 t DM/ha

## Yield

Overall, Baronaise provides good yields whether grazed or cut. As one of the latest heading varieties in the group, with particularly strong yields in the autumn making it a useful variety where late turnout or winter keep for sheep is needed.

## Other Attributes

Baronaise has very good ground cover scores and is a very persistent variety.

Being a timothy, you should expect an average of 4,000,000 seeds per kilogram so a little goes a long way due to the very small, light seed weight. Timothy is a species which can perform very well on heavier, wetter soils in wetter climates.

Before official recommendation, Baronaise has been extensively trialled across 12 different sites in the United Kingdom as well as several more locations in Europe to gather data on its performance in multiple climatic conditions.

Baronaise was bred in Holland at Barenbrug NL by Marcel van Nes at the Wolfheze breeding station. Marcel comments: "Baronaise is a great improvement in yield and persistency".
