

V8™

Golf Course Greens, Tees, and Fairways

Heat Tolerance

Low Thatch Production

Disease Resistance

Key features

- Early Spring Green-up
- Medium-dark Green Color
- Great Recovery
- #1 NTEP for Quality (LPI Grp 1)

A-List Certified

V8 is currently certified with the Alliance for Low Input Sustainable Turf. To learn more about A-List and the certification process visit their website at: a-listturf.org

Maintenance:

New Seeding: 1-2lbs./M*
Interseeding 2 lbs./M*

*M=1,000 sq. ft.

V8 is a powerhouse creeping bentgrass developed for any golf course wanting that “world-class” look.

V8 is a hybrid between two elite breeding lines selected for close-cut tolerance and improved dollar spot resistance. V8 has been seeded on golf courses worldwide and has received excellent ratings in NTEP (National Turfgrass Evaluation Program) putting green trials.

Technical Information

Applications

V8 is a versatile bentgrass and is used on tees, fairways and greens. Its low thatch production makes it an excellent selection for wide areas where routine maintenance can be labor intensive such as tees and fairways. With superior heat tolerance, V8 thrives across the cool, temperate regions of the world, and it is adapted well into the transition zone between warm and cool-season areas. Providing earlier spring green-up and holding color longer into the fall, it allows for a more aesthetic appeal longer playing season. V8 and T-1 can be blended to allow for even more versatility, combining their traits to provide a stronger healthier stand that persists in challenging environments and periods of excessive use.

Establishment

For in-depth establishment and maintenance tips please see our “Bentgrass Management Guide”.
