

Combi

Flexible, extensive, long-term ley suited to cutting and grazing.

- COMBI is a clover-free version of Cut & Graze, giving all the benefits of a top grass sward for situations where high nitrogen input is common practice or if docks are a problem
- Its blend of the best recommended intermediate and late heading ryegrass is designed to produce a very high-yielding, flexible, dense, palatable, long-term, top class cutting mixture which will also produce quality grazing
- The high proportion of tetraploid varieties ensures better drought resistance and higher water soluble carbohydrate content
- *Youpi* provides a highly digestible sward suitable for cutting or grazing which performs best early in the season with well balanced growth for the rest of the year
- *Fintona* is the highest yielding perennial ryegrass ever listed in the UK with unrivalled spring grazing yields and impressive sward density for the type. As the highest yielding 2-cut silage diploid perennial, *Boyne* provides maximum yield potential for silage production

In the bag

4.00kg	Boyne	Intermediate Perennial Ryegrass (DIP)
3.00kg	Fintona	Intermediate Perennial Ryegrass (TET)
4.00kg	Glenarm	Late Perennial Ryegrass (DIP)
3.00kg	Youpi	Late Perennial Ryegrass (TET)

Sowing rate per acre:	14kg per acre
Sowing rate per m²:	1,616 seeds per m ²
