

E16-C

Embankment & Ground Cover plus Clover

Added clover to steep embankments

Our E16 mixture with the added benefit of small leaf white clover.

Designed to give rapid, yet long lasting ground cover on steep embankments and areas of unstable or loose soil. Utilises deep-rooted and creeping species to stabilise and bind soil.

- White clover fixes nitrogen, making this the best choice for very thin, impoverished soils
- Creeping and deep-rooted grass species to stabilise soil
- Rapid germination from 'nurse crop' annual ryegrass
- Very tolerant of harsh conditions

E16-C	
Usage:	Steep banks; thin impoverished soil; areas of loose or unstable soil
Mixture Formulation:	20% Perennial ryegrass
	20% Strong creeping red fescue
	15% Annual ryegrass
	12.5% Tall fescue
	12.5% Slender creeping red fescue
	10% Hard fescue
	5% Bentgrass
	5% White clover

How to use it	
Sowing rate:	25-50g per m ² ; higher sowing rates for steep slopes
Height of cut:	Down to 50mm
Pack size:	20kg
