embankment &
ground cover
+ clover

FACTSHEET

17

Added clover. For rapid establishment and stabilisation of impoverished soil.

Our E16 mixture enhanced with white clover to provide a supply of nutrients for the neighbouring grass plants. The mixture will give rapid germination due to the inclusion of annual ryegrass which will act as a 'nurse crop', giving protection to the other species whilst they establish. The mixture includes a combination of deep-rooted, creeping, drought tolerant and hardwearing species to create an incredibly hardy mixture

- + White clover is added to provide a supply of nutrients on impoverished soils
- + Rapid germination from annual ryegrass which acts as a nurse crop
- + Creeping and deep-rooted grasses for soil stabilisation
- + Very tolerant of harsh conditions
- + Available without white clover, see E16 Embankment and Ground Cover

20%	Perennial ryegrass
20%	Strong creeping red fescue
15%	Annual ryegrass
12.5%	Slender creeping red fescue
12.5%	Tall fescue
10%	Hard fescue
5%	Bent
5%	White clover

Areas of use:

- + Embankments
- + Areas of loose and unstable soils
- + Road verges

Pack Size	20kg
Sowing rate	25-50g/m ²
Cutting Height	Down to 50mm

(A high sowing rate is recommended when sowing on steep banks.)
