Supercharged BERMUDAGRASS

WITH YELLOW JACKET® SEED COATING

RIVIERA WITH YELLOW JACKET

Riviera is one of the best seeded bermudagrass varieties on the market and Barenbrug USA is proud to announce that it can now offer exclusively this outstanding variety with Yellow Jacket seed coating. With the addition of our Yellow Jacket seed coating technology we have made one of the best bermudagrasses on the market even better.

RIVIERA

Riviera's quality, color, texture, uniformity and density have been NTEP top-ranked in its class. And time after time, it has also proven its exceptional disease resistance and stress tolerance. So during both your season and off season, Riviera reduces your concerns and costs even further. Riviera brings you the best benefits from Bermudagrass – greater stress and wear resistances, faster recovery – plus it's the Bermuda with unbeaten cold tolerance.

YELLOW JACKET TECHNOLOGY

Yellow Jacket, Barenbrug's proprietary seed coating, utilizes Zeba superabsorbant technology to produce a coating that can hold up to 600 times its own weight in water. Research trials at the University of New Mexico proved that seed coated with Yellow Jacket established faster and required less water. These results are critical as water has become a precious global asset. Yellow Jacket simultaneously helps seed thrive while conserving water.

NEW MEXICO STATE UNIVERSITY SEED COATING TRIAL

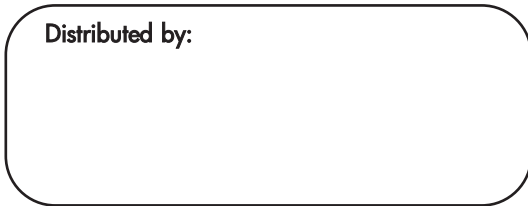

Barenbrug conducted two extensive studies on seed coating with Bernd Leinauer at New Mexico State University. Bermudagrass coated with our proprietary Yellow Jacket coating showed better germination and establishment than uncoated seed. The high moisture trial was set at 98% of evapotranspiration while the low moisture trial was set at 56% of evapotranspiration. This trial work shows the coated seed establishes faster and maintains ground cover better than the uncoated seed.
