

Permanent (no clover)

Intensive long-term grazing mixture with cutting option.

- PERMANENT (no clover) is a blend of perennial ryegrass and white clover designed to give season-long production from a dense, prolific ley
- This long-term mixture gives the option of taking later cuts of top quality silage
- Trials at Moorepark in Eire have shown that cows grazed on this type of ley will produce more milk
- The tetraploid varieties in PERMANENT (no clover) have been carefully selected to ensure higher water soluble carbohydrate content while not sacrificing sward density
- Contains late heading varieties *Clanrye* and *Glenarm* which add superior sward density and high D value quality grazing to the mixture
- *Ballintoy*, new for 2019, produces excellent silage yields and digestibility and provides quality grazing swards throughout the year

In the bag

4.00kg	Glenarm	Late Perennial Ryegrass (DIP)
4.00kg	Clanrye	Late Perennial Ryegrass (DIP)
3.00kg	Youpi	Late Perennial Ryegrass (TET)
3.00kg	Ballintoy	Late Perennial Ryegrass (TET)

Sowing rate per acre: 14kg per acre

- *Youpi* provides a highly digestible sward suitable for cutting and grazing which performs best early in the season with well balanced growth for the rest of the year
- The omission of clover in the mixture allows for cost effective weed control
- Uses all Herbage Varieties Guide recommended varieties
