

High D Italian

A highly productive short-term Italian ley

- HIGH D is a highly productive Italian ley, which will give exceptional crops for silage, hay or grazing from a high input system. It's ideal for growers who want to produce the maximum amount of forage possible from their own land
- HIGH D has a very long growing season; its exceptional spring growth makes it ideal for lamb finishing or early turnout. An early grazing can be followed by up to four cuts of quality silage and a late flush for grazing.
- HIGH D is a better option than sowing a single Italian ryegrass variety
- It will provide massive amounts of clean, quality forage throughout the year without any loss of production mid season
- HIGH D grows down to 3°C soil temperature, extending the growing season for store lambs or wintering hoggets
- Includes three Italian ryegrasses, all of which perform very well compared to their rivals

In the bag

6.00kg	Barmultra II	Italian Ryegrass (TET)
4.00kg	Steel	Italian Ryegrass (DIP)
4.00kg	Abys	Italian Ryegrass (DIP)

Sowing rate per acre:	14kg per acre
Sowing rate per m²:	1,216 seeds per m ²

- High ranking *Barmultra II* has excellent spring grazing and silage yields
- Responds very positively to high levels of fertility and will produce 20% more yield than perennial ryegrass leys
