FESCUE is an outstanding blend of four red fescue cultivars; *Viktorka*, *Barcrown*, *Barlineus* and *Bodega*, for the overseeding and construction of free-draining fine turf.

The mixture is made up of 50% slender red creeping fescue and 50% Chewings red fescue seed. The combination of these two sub-species offers the best solution for year-round performance and growth in fescue-dominant turf – Chewings fescues will generally be most active in spring through to mid-summer, whereas slender creepers “kick in” during early summer and perform well through to autumn.

Table 1 shows the performance of the cultivars in the BSPB Turfgrass Seed Booklet 2021: Tables G2 & G3. FESCUE contains both the top-rated Chewings and slender varieties (*Barlineus* and *Barcrown*).
