

## High D Italian

A highly productive short-term Italian ley

- HIGH D is a highly productive Italian ley, which will give exceptional crops for silage, hay or grazing from a high input system. It's ideal for growers who want to produce the maximum amount of forage possible from their own land
- HIGH D has a very long growing season; its exceptional spring growth makes it ideal for lamb finishing or early turnout. An early grazing can be followed by up to four cuts of quality silage and a late flush for grazing
- HIGH D is a better option than sowing a single Italian ryegrass variety
- It will provide massive amounts of clean, quality forage throughout the year without any loss of production mid season
- HIGH D grows down to 3°C soil temperature, extending the growing season for store lambs or wintering hogs
- Includes two Italian ryegrasses, all of which perform very well compared to their rivals

### In the bag

7.00kg	Javorio	Italian Ryegrass (DIP)
7.00kg	Gemini	Italian Ryegrass (TET)

<b>Sowing rate per acre:</b>	14kg per acre
<b>Sowing rate per m<sup>2</sup>:</b>	1,202 seeds per m <sup>2</sup>

- *Javorio* and *Gemini* are high yielding, all round varieties with excellent quality
- Responds very positively to high levels of fertility and will produce 20% more yield than perennial ryegrass leys
